CAPABILITY STATEMENT

CORE COMPETENCIES

 **Intelligent Document Processing** : AI-powered intake, extraction, classification and routing of forms, applications, invoices, and records, eliminating manual data entry and reducing processing backlogs.

 **Workflow & Process Automation** : End-to-end automation of repetitive administrative workflows (approvals, reporting, data transfers between systems), freeing staff hours for mission-critical work.

 **AI Chatbots & Virtual Assistants** : Internal and public-facing conversational AI for FAQs, help desk triage, and constituent services, deployed securely and rapidly.

 **Data Analytics & Reporting Automation** : Automated dashboards and recurring report generation that turn scattered spreadsheets into real-time decision support.

 **AI Readiness Assessments** : Rapid evaluation of an organization's workflows to identify, prioritize, and roadmap the highest-ROI automation opportunities.

DIFFERENTIATORS

-  Veteran-Owned & Mission-Driven
-  Fast 30-60 Day Development
-  Mission-Grade Automation – Measurable Results
-  GPC & Fixed-Price Procurement Friendly

COMPANY DATA

UEI : RGYGN6RB39G6

CAGE CODE : 22TG7

STRUCTURE : LLC (Georgia)

PRIMARY NAICS

541511 – Custom Computer Programming Services

ADDITIONAL NAICS

541512, 541519, 541611, 518210

BUSINESS TYPE

Marine Corps Veteran-Owned
Small Business

SBA VOSB Certification:

Application Pending (App 112732)

ACCEPTS

Government Purchase Card (GPC)

PAST PERFORMANCE — REPRESENTATIVE CAPABILITIES

Production systems designed, built, and deployed by the founder; live demonstrations available.

Property-Tax Outreach Data Pipeline

Designed and deployed an automated workflow that processed 95,000 county property-owner records, reducing them to 63,000 verified individual homeowners by filtering out business, trust, and probate-held entities with a deterministic rule-based classifier. Enriched the qualified list with verified contact data via skip-trace integration, delivering an outreach-ready dataset supporting a program that helps homeowners claim \$1,000–\$2,000 in annual property-tax savings per filing.

Automated Web Data Collection & Document Pipeline

Built an automated pipeline that ingests a 100+ record target list, de-duplicates and validates entries, crawls each source via a commercial API using asynchronous job management with configurable timeouts and per-source failure logging, and delivers organized, per-source document files to cloud storage — replacing an estimated 40+ hours of manual research per run with an unattended process with full error accountability.

Prospect Intelligence & Enrichment Pipeline (Metro Atlanta / Statewide Georgia)

Designed and deployed an automated data-enrichment pipeline (n8n, Apify, Google Workspace APIs) that ingests prospect records, retrieves public engagement data via API, and publishes enriched output to cloud storage — processing 140 prospect records and 3,299 social posts at a 100% capture rate with rate limiting, automated error handling, and per-record status auditing. Diagnosed and remediated a silent data-loss defect in the production workflow, implementing payload validation and reconciliation checks that raised record completeness from 3% to 100%. Added AI-assisted scoring that converts raw engagement data into decision-ready metrics (activity recency, 30/60-day engagement flags, qualification markers), enabling prioritized outreach without manual review.
